

Optical Spectrum Extended Access (OSEA) Filter Connect Lite

Unleash your business with high
bandwidth, short and long distance,
low latency connections

About this pack

The information contained within these slides is for information purposes only and represents no commitment and is not intended to be an offer in whole or part. Any developments carried out by CPs based on this information are entirely at the CPs' own risk.

It should be noted that the proposals for the products outlined in this slide-pack represent Openreach's current view at the time of publication. These proposals may change through further development and feedback. All timescales are target estimates only.

These statements involve risks and uncertainties, actual outcomes may differ materially from those expressed or implied by these forward-looking statements, which may include, without limitation, changes in market conditions; supplier arrangements; future regulatory actions and conditions.

Demand for high bandwidth continues to grow

100Gbps is the reality in most service provider networks

100Gbps capacity

is taking over in enterprise end-customer wide area networks

Early enterprise

adopters of high bandwidth services include finance, government and media, followed closely by other verticals.

Optical services

A secure, flexible and cost-effective way to move very large amounts of data via dedicated fibre links

What this means for you and your customers

Transport high bandwidths in a more effective way

OSEA Filter Connect Lite is a hub and spoke based solution efficiently delivering multiple 10GE spoke links into a small footprint aggregation point at key locations in your network.

With Ciena's Adaptive IP functionality built into the OSEA Filter Connect Lite equipment* you can deliver IP-based connectivity for 5G, IP VPN Business Services, Cloud, Fiber Deep, legacy TDM, and Edge Computing with the service velocity and performance your customers demand when you need to while saving on space and power.

High capacity and port density

- 10GE /100GE

Support future growth

- add spoke bearers as needed, without stacking
- emerging network features e.g. 5G, 25GE, VNF

Pay only for what you need

Stop stacking

- get your services together – minimise footprint and power consumption

Use one box (subject to your requirements and system design)

- save power consumption

Fully managed by Openreach

*Available on certain OSEA Filter Connect Lite NTE only. Additional license required.

Plus the quality you've come to expect

> Dedicated fibre

Our solutions use dedicated fibre, meaning you get exactly what you pay for with full control of your additional bandwidth / wavelength requirements

> True resilience

Our resilient paths use dedicated fibre too, so you'll never have to compromise should the worst happen

> UK wide coverage

You can be confident that that we will be here to help you expand to new sites later (subject to survey) without the worry of being off-net

> Experts backed by experts

Solutions designed by highly qualified teams and supported by our equipment vendor, ensure they are the very best that can be provided

> Your promises are our promises

Circuits that we endeavour to install on time, every time so you can keep your promises to your customers

> Choices of minimum period options

All delivered via a managed service approach

Chosen to ensure we could offer the very best solution, fast

We already have proven capability for best practice use of third parties to carry out installation on our behalf.

We are now building on our excellent, long-standing supplier relationship with **ciena** to bring leading platform technology to market via a deeper 'managed service' model.

What this means:

No fundamental differences in order processes from other Optical products

All touch points remain via Openreach

All physical installation and repair functions of the service are supported by Ciena.

Benefits to you:

We're ready **to support your 10GE and 100GE requirements** today.

Access to trained expertise and worldwide market experience helps us to inform best practise design choices for specific sectors and requirements

Our joint expertise is already placing a focus on continued lifecycle improvements e.g. fault-finding and diagnostics.

Expert advice that really counts

To ensure your optical network investments work as hard for you as possible we'll help you:

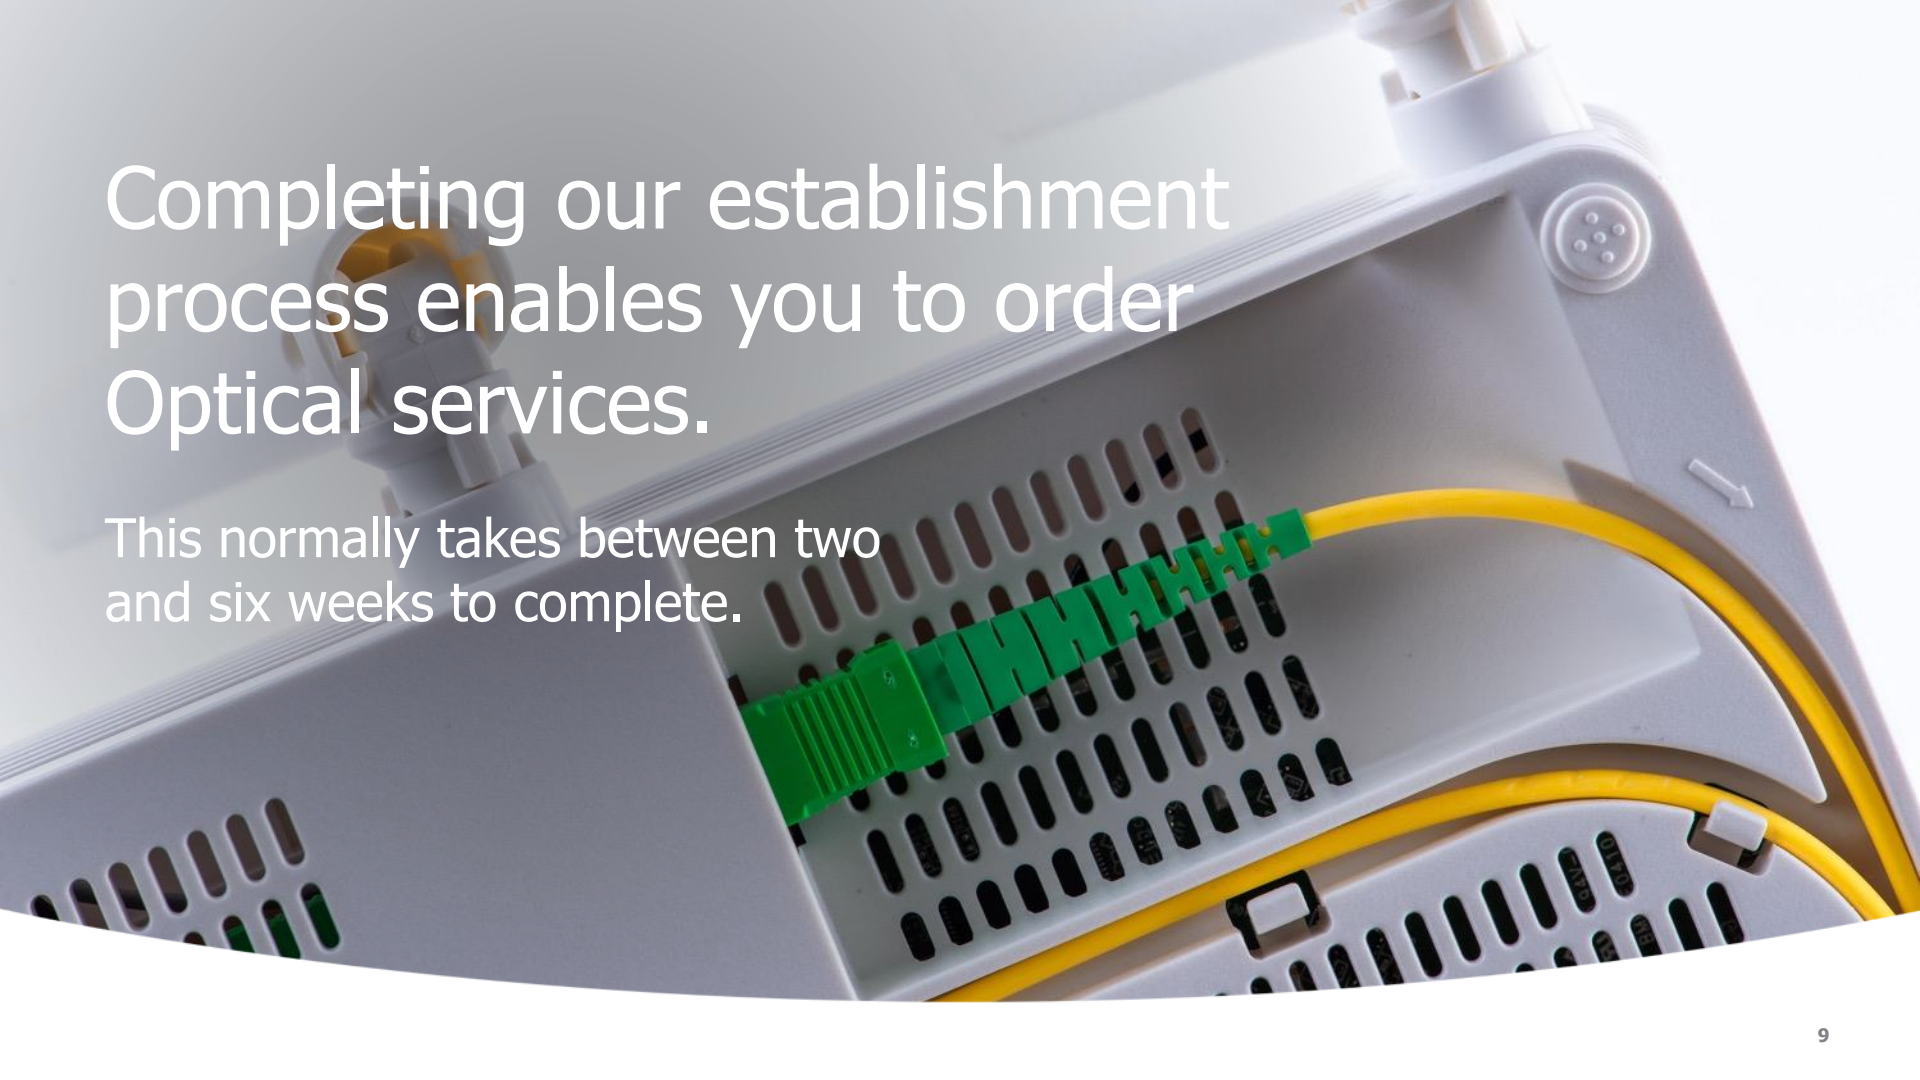

- Make choices that meet your longer term requirements
- Avoid solutions that will restrict your ability to expand
- See through solutions that are cheap at first, but force you to invest again later

We need to do a few things to get you started:

- Explain the process and provide all the advice and guidance you need
- Answer all your questions about working with us
- Provide product information / guidance when needed
- Complete all the details necessary to set you up on our systems.

If you're new to Optical solutions, or need our advice, we'll help you understand:

- When it makes sense to switch from multiple circuits
- How to add optical circuits to improve business continuity in your existing network
- How optical solutions could help you save thousands of pounds on space and power.

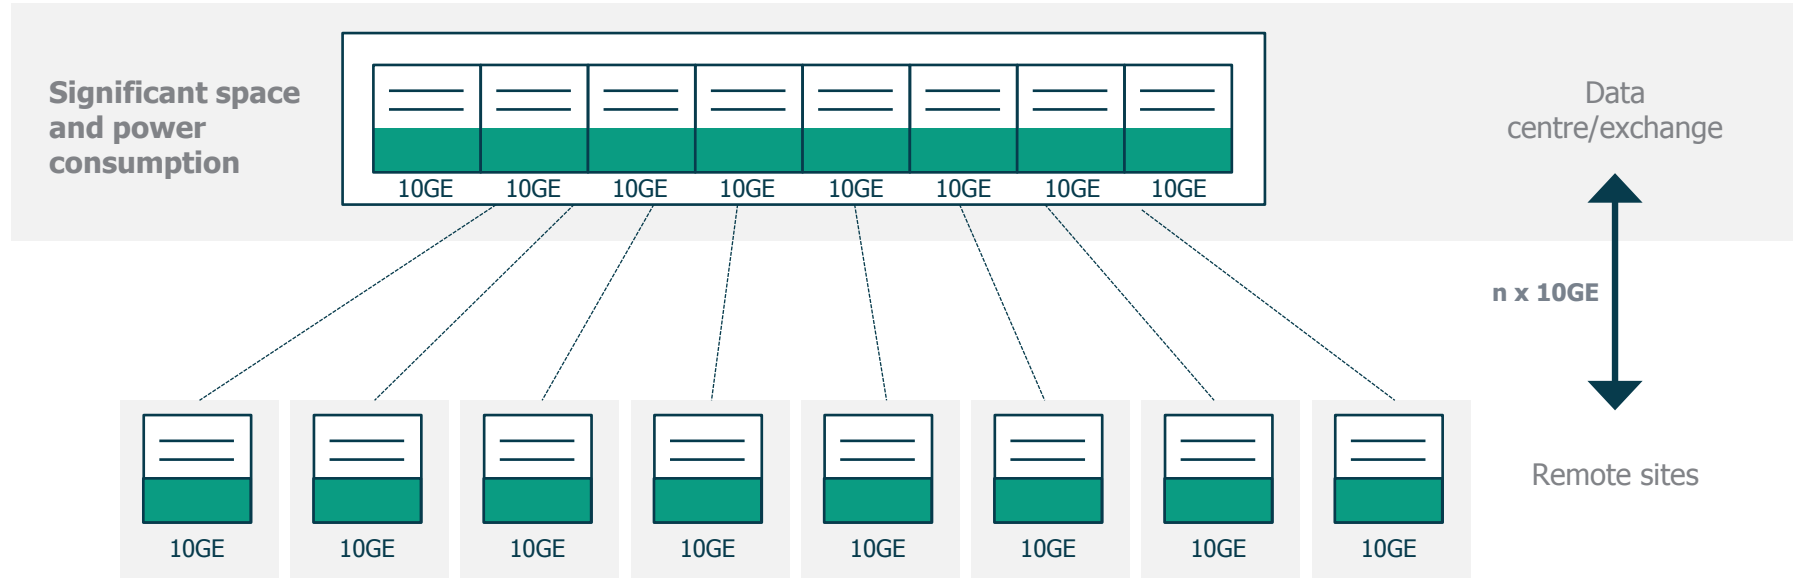

A close-up photograph of a white plastic fiber optic patch panel. A green fiber optic connector is plugged into one of the ports. A yellow fiber optic cable is routed through the panel, secured by a white plastic latch. The panel has a grid of ventilation holes and a small circular button on the right side. The background is a plain, light color.

Completing our establishment
process enables you to order
Optical services.

This normally takes between two
and six weeks to complete.
